Muscle

For increasing muscle mass and enhancing performance

MUSCLE is a concentrated liquid dietary supplement that contains the amino acids L-leucine, L-isoleucine, valine and glutamine, along with other nutrients, plant steroids and complexes such as ketoglutarate (okg) and a unique cactus extract that promotes the anabolic status of the horse, while inhibiting catabolism (muscle breakdown). MUSCLE has been show to increase lean muscle mass, improve energy and endurance, delay fatigue, reduce lactic acid build-up, improve oxygen availability and accelerate recovery.

MUSCLE promotes the anabolic condition in a manner similar to steroids. Where steroids retain nitrogen, MUSCLE delivers and inhibits the loss of nitrogen, which prevents the breakdown or loss of lean muscle tissue. Further, MUSCLE minimizes stress and optimizes the metabolism at the cellular level. This, combined with the anabolic properties of MUSCLE, optimizes cellular metabolism providing for accelerated recovery, enhanced muscle building and a healthier, stronger animal.

We have spent nearly twenty years in the research and development of dietary supplements to meet the needs of elite athletes. This research has been conducted in conjunction with one of America's premier training and conditioning specialists, at several university and medical research centers, with over four hundred athletes from across the complete sports spectrum. In one study that measured the ability to increase lean muscle mass, the athletes were gaining 1.1 pounds of lean muscle per week! This is equal, or superior to the gains made by anabolic steroids! MUSCLE is based on these studies - imagine the effect of MUSCLE on the horse!

Within a week, you will notice a more positive and stronger attitude, a sense of vigor and vitality, along with a better appetite. Shortly thereafter, you will notice that the horse will develop a harder feeling; fat will be reduced, and the horse will take on a more vascular look. The neck will be trimmer and leaner and the coat shinier. You may not notice the rapid overall weight gain that steroids provide, because the bulk of the gain from steroids is water weight. What you will notice is an increase in lean muscle mass. **MUSCLE is the legal non-prescriptive alternative to anabolic steroids!**

COPPERQUINE

State-of-the-art in copper and iron supplementation for the equine

Combining these critical minerals with bioactive components, an antioxidant and trace mineral ensures the highest degree of absorption and utilization possible, while providing maximum protection to the horse.

COPPERQUINE addresses the problems of epiphysitis, oxygen transport, free radical damage, bone and cartilage formation, cellular protection, flora production, microbial damage and inflammation.

With the addition of the bioactive component Lactoferrin, Copperquine ensures maximum absorption and utilization of iron, which significantly reduces the amount required daily and prevents the numerous problems associated with excess iron intake.

COPPERQUINE also contains the bioactive component Lactoperoxidase, which exerts a strong anti-microbial effect against a wide-range of microorganisms, while enhancing the production of the beneficial flora in the digestive tract. Lactoperoxidase also exhibits anti-inflammatory characteristics.

Vitamin E, along with the expensive and bioactive form of selenium affords antioxidant protection and extends the life of red blood cells critical to maintaining cellular health.

COPPERQUINE ensures optimal health and vitality for the horse, with a sensible and profiled formula of highly bioactive components, minerals and other nutrients based on the latest scientific data.

WIND

For the performance horse during times of stress

WIND is an ergogenic aid designed for the performance horse during times of peak stress. The ingredients in WIND have been shown to increase energy production, reduce lactic acid buildup, improve oxygen availability, minimize muscle soreness, inhibit cramping, and accelerate recovery. WIND enhances all three of the animal's energy systems: ATP/CP (muscle energy), lactic acid (glycolytic), and oxidative (aerobic). Legal, safe and natural, use WIND for optimal performance and recovery!

WIND is the most powerful and legal ergogenic aid ever made available to the performance horse. A 21st century weapon in the performance arsenal, WIND is a unique, scientifically profiled blend of energy enhancing nutrients that exert a stunning and unbelievable positive effect on cellular metabolism! No other product enters the marketplace with such a wealth of research to support its potent and immediate effects on performance.

WIND brings to the performance horse an array of highly bioactive nutrients that include: DMG, PAK, creatine, betaine, a full spectrum of phosphates, co-factors, and other nutrients that act in synergism to elevate cellular metabolism to a new level!

Regular use of WIND should provide the performance horse with:

- Enhanced ATP, lactic acid, and oxidative energy systems
- Improved ATP (muscle energy) production
- Inhibited ATP breakdown and accelerated recovery
- Delayed fatigue and extended endurance
- Superior muscle-glycogen effect
- Inhibited build-up of lactic acid
- Increased anaerobic threshold
- Improved oxygen utilization
- Reduced muscle soreness and inhibited cramping
- Improved efficiency of cellular metabolism
- Improved healing and repair process

WIND is the answer to immediate superior performance and recovery! WIND packs a powerful, fast-acting punch with a nutrient dense ergogenic aid that brings immediate results! Ideal for ALL types of performance horses, WIND is a MUST for the animal owner concerned with cramping, muscle soreness and recovery!

VITAL

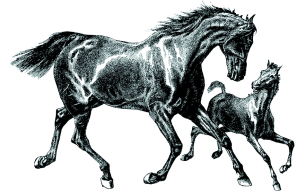

Liquid multi-vitamin for the performance horse

VITAL represents a new dimension in liquid multi-vitamin nutritionals for the performance horse. VITAL combines a high B-complex, anti-oxidant and vitamin formula with an enriched base of Kentucky bluegrass, yucca and alfalfa extract, and aloe vera. Key nutrients and specific amino acids are added to provide a scientifically profiled formula that will meet the most rigorous demands of the equine.

Rich in co-factors and co-enzymes, VITAL enhances cellular metabolisms to strengthen the immune system, offset the debilitating effects of stress and provide vital protection against free radical damage. As a full-spectrum multiple, VITAL provides a strong nutritional base that ensures optimal performance and recovery levels for the working equine.

VITAL maximizes the nutritional value of the daily feed and works synergistically with other nutritional supplementation. As a liquid, VITAL is quickly absorbed with rapid uptake and maximum utilization of the fast-acting nutrients.

Convenient to administer, VITAL is an efficient and effective way to ensure that your horse is receiving the best in nutrition.

MUSCLE MAX

The legal breakthrough to anabolic steroids

MUSCLE MAX represents a breakthrough in anabolic and ergogenic supplementation for the equine, with a scientifically-profiled formula that is unsurpassed for increasing lean muscle mass and enhancing performance.

MUSCLE MAX takes advantage of the cell-volumizing characteristics of creatine monohydrate and combines them with a complex of carefully profiled nutrients that have been demonstrated to have a positive impact on nitrogen and energy metabolism, through improved protein synthesis, work tolerance, energy and recovery rates.

Research has shown that cell-volumizing has a definite and immediate impact on strength, workload and protein synthesis, by super-hydrating the muscle and increasing glycogen synthesis, which inhibits the breakdown of lean muscle.

MUSCLE MAX further enhances its cell-volumizing characteristics with the addition of those amino acids that play an important role in nitrogen metabolism, while exerting a strong anti-catabolic effect and acting as precursors for the formation of creatine.

The addition of a phosphate complex increases the phospho-creatine reservoir to extend energy, delay fatigue, enhance protein synthesis and accelerate recovery.

This unique formula is presented in a strong carbohydrate base that acts to accelerate absorption and drive the other ingredients into the muscle cell, while preserving the equine's valuable protein stores.

MUSCLE MAX elevates equine performance, lean muscle gains and recovery to a new level. No other formula can pack on the lean, hard muscle as fast and as safely as does MUSCLE MAX.
